

## Section 1: Introduction

In this report I will go into detail about my solution to stage 1 of the Major Assessment. In stage 1, a connection is created between a simulated DS server and a client server. Which involves sending handshakes, server scouting and job scheduling. The purpose of this is to demonstrate how a real life client-server job scheduling would take place. In section 2, I provide a high-level system overview to help understand how the system would work. Section 3 goes into detail about the design of the overall framework, the constraints functionalities etc.,. Section 4 explains the implementation of the solution, libraries involved, technologies used etc.,
